

[Lmt]

** These are Limitations of SIP IPv6 conformance test tool for Server in v1.0 .

1. Supported transport protocol is only UDP.
2. The path MTU is 1500 byte.
3. Supported URI scheme is only SIP-URI.
4. Supported media type of the message-body is application/sdp.
5. The multipart MIME type is not supported.
6. Only unicast session is supported.
7. Message segmentation is not assumed.
8. IPSec, TLS is not supported.
9. DNS (NAPTR, SRV) procedure is not supported.
10. We assume that target proxy server wishes to remain on the path of future requests in a dialog(i.e. target proxy server would add Record-Route header when it forwards the request to downstream).
